

RETROFITS UPGRADES FOR EXISTING MACHINES

Messer Cutting Systems offers a variety of retrofit packages to upgrade existing cutting machines with the latest technology and processes. Choosing a retrofit or software upgrade will not only increase productivity, but will also extend the machine's life, and can be more cost effective than replacing the entire system.

RETROFIT KEY FEATURES INCLUDE:

- **Retrofits are fully engineered and integrated both mechanically and electrically with the existing machine.**
- **Machine components, mounting brackets, and interfacing cables, hoses, and wiring are never welded or spliced over the existing equipment, they are designed specifically to fit your Messer machine.**
- **Installation, start-up, check-out, and training is performed by a Messer Cutting Systems professional.**
- **Comprehensive documentation including schematics, bill of materials and part numbers are included with each package.**
- **Sub-assemblies are pre-assembled prior to shipment for faster on-site installation and reduced machine down time.**

AVAILABLE RETROFIT PACKAGES

- Oxyfuel torch upgrades
- Plasma system upgrades
- Plasma torch height controls
- Markers
- Cameras
- Track extensions
- Dowlndraft tables and extensions
- Controls
- Several types of bevel heads
- Rebuilds and remanufactured machines
