MESSER
Cutting Systems

VIRTUAL TRAINING
REMOTE INTERACTIVE SUPPORT

FEATURES AND BENEFITS:

- Messer Cutting Systems Applications Engineers can provide Virtual Training on Omni software and Messer machines with Global Controls.
- We can connect with customers that have an active Virtual Service contact to remotely train your operators, even if they have not had prior experience on this equipment.
- We can also work with your programmers remotely using Fast Support.
- Virtual Training is a cost effective way to train your operators and programmers without waiting for an AE to travel to your facility.
- Our Omni software experts can help your programmers with simple part generation/importing or help with complex multi-process parts, including bevel cutting.
- With a current Virtual Service contact and an Omni software version running on Windows 10 operation system, we can support you from part design to final cut.
- The Virtual Training is no cost to you and can be done multiple times until you are fully trained.
